Connecticut Company Positions Itself As A Leading Partner To Medical Device Manufacturers

Northeast Laser & Electropolish easily passes its ISO 9001 one-year re-certification audit.

Monroe, CT (PRWEB) September 23, 2011

Northeast Laser & Electropolish easily passes its ISO 9001 one-year recertification audit.

Beginning September 12, Northeast Laser & Electropolish <http://www.northeastlaser.com> was subject to a ISO 9001 one-year audit. After three days of intensive questioning, research, and observation of Northeast Laser's quality system, the auditor did not have any non-conformances to document.

Northeast Laser & Electropolish (NLE) began implementing its ISO 9001 quality system in late 2009. Since then NLE has won projects and partnered with more medical device manufacturers to expand its business.

According to Kurt England, one of the partners at NLE, "It was well worth the effort. Our quality system prior to implementing ISO 9001 was adequate for doing small job-shop work. We wanted to grow the company and knew that to do so, we needed to step it up a notch and show that we are capable. The best way to do that was to improve our quality system. Following the ISO standard helped us to get there."

Northeast Laser & Electropolish continues to grow by improving its methods and expanding its capabilities—ensuring its customers the largest breadth of services and highest quality with the best value.

Northeast Laser and Electropolish provides laser marking, laser welding, laser cutting, electropolishing and passivation services to a wide range of companies throughout the United States and abroad. The company is well known for quick turnaround, high quality, outstanding customer focus, and the ability to handle both high and low volume projects, whether technically routine or challenging.

For more information about Northeast Laser and its services, see <http://www.northeastlaser.com> or call 203-268-7238.
